FIT3179 DV1 Project Ideas

Volume 7: Technology & Digital Life (Australian Focus)

---

1. Internet Usage in Australia

Investigate how Australians use the internet across different age groups, households or regions. Compare internet access, usage patterns or online activities over time. Explore how internet usage has changed as digital technologies have become part of everyday life.

2. Digital Inclusion

Investigate digital inclusion across Australia by comparing internet access, affordability and digital ability across different population groups. Explore how digital inclusion has changed over time and identify communities facing digital disadvantage.

3. Smartphone Usage

Investigate smartphone ownership and usage across Australia. Compare different age groups, usage habits or common smartphone activities. Explore how smartphones have changed the way Australians communicate and access information.

4. Online Shopping Behaviour

Explore how Australians use online shopping platforms for purchasing goods and services. Compare shopping frequency, spending categories or consumer preferences over time. Investigate how online shopping habits have evolved.

5. Digital Payments

Investigate how Australians make payments using debit cards, mobile wallets, contactless payments or other digital methods. Compare payment preferences across different demographic groups or years. Explore Australia's transition towards a cashless society.

6. Cybersecurity Awareness

Explore survey data related to cybersecurity knowledge and online safety. Compare awareness across different age groups or user types and investigate common online risks. Identify how cybersecurity awareness has changed over time.

7. Online Privacy

Investigate Australians' attitudes towards online privacy and personal data protection. Compare concerns across different demographic groups or years. Explore how public awareness of digital privacy has changed.

8. Internet Safety for Young People

Explore data related to online behaviour, cyberbullying or internet safety among children and teenagers. Compare trends across age groups or years. Investigate how digital education may influence safer online behaviour.

9. Digital Government Services

Investigate the use of online government services in Australia. Compare adoption rates, service usage or user satisfaction across different years. Explore how Australians are increasingly interacting with government services online.

10. Artificial Intelligence Adoption

Investigate how artificial intelligence is being adopted by Australian businesses or organisations. Compare industries, business sizes or adoption rates over time. Investigate which sectors are leading the use of AI technologies.

11. Technology in Education

Investigate the use of digital technology in Australian schools or universities. Compare access to devices, online learning participation or digital skills across different student groups. Explore how technology has changed education.

12. Remote Work in Australia

Explore trends in working from home and flexible work arrangements. Compare industries, occupations or employee preferences over time. Investigate how remote work has changed Australian workplaces.

13. Digital Skills

Investigate digital literacy or technology skills across different age groups in Australia. Compare trends over time and identify groups with stronger or weaker digital capabilities. Explore how digital skills support education and employment.

14. Australia's Technology Workforce

Explore employment trends within Australia's technology sector. Compare occupations, industries or workforce growth over time. Investigate which technology careers are experiencing the greatest demand.

15. Startup Innovation

Investigate Australia's technology startup ecosystem by exploring startup industries, investment or business growth. Compare emerging technology sectors and identify areas of rapid innovation. Explore how Australia's startup landscape has evolved.

16. Robotics in Australia

Explore the use of robotics across industries such as manufacturing, healthcare, agriculture or mining. Compare adoption across sectors and investigate how robotics is changing workplaces. Explore trends in automation over time.

17. Smart Homes

Investigate the adoption of smart home technologies such as smart speakers, security systems or connected appliances. Compare household adoption across different demographic groups or years. Explore changing consumer interest in connected homes.

18. Wearable Technology

Explore the use of wearable devices such as fitness trackers and smartwatches. Compare adoption across different age groups or lifestyles. Investigate how wearable technology supports health, fitness and everyday activities.

19. Digital Media Consumption

Investigate how Australians consume digital media including online video, streaming audio, online news and other digital content. Compare usage across age groups and explore changing media consumption habits.

20. Video Game Industry

Explore Australia's video game industry by investigating player participation, game genres or industry growth. Compare gaming habits across different demographic groups. Investigate how gaming has become a significant part of digital entertainment.

21. Mobile Applications

Investigate how Australians use mobile applications across categories such as finance, health, education or entertainment. Compare app usage across different age groups or years. Explore changing trends in mobile technology.

22. Digital Communication

Explore communication methods such as email, messaging applications and video conferencing. Compare communication preferences across different age groups or over time. Investigate how digital communication has changed personal and professional interactions.

23. E-commerce Businesses

Investigate the growth of Australian online businesses across different retail sectors. Compare business activity, customer engagement or online sales trends. Explore how digital commerce continues to transform Australian businesses.

24. Technology and Everyday Life

Investigate how Australians use technology in daily activities such as banking, shopping, education, healthcare or entertainment. Compare technology adoption across different population groups. Explore how digital technologies have changed everyday life.

25. Australia's Digital Future

Investigate a collection of indicators related to internet access, digital skills, online services, technology adoption and innovation. Compare trends across multiple areas to understand Australia's digital transformation. Use the data to tell a broader story about the role of technology in modern Australian society.

Note: Focus on investigating user behaviour, technology adoption, industry growth or digital transformation rather than reviewing or comparing individual products or brands.
